Description:

Flat-panel loudspeakers for integration into interior constructions and furniture.

The loudspeaker system that works on the principle of a bending-wave transducer. It has a flat-panel membrane, which is set into vibration by an exciter that is mounted on the rear. Suitable for rear installation or to fit flush with walls, ceilings, platforms, furniture, etc. The surface is suitable for the following designs:

Genuine wood veneers or laminates, can be smoothed over, varnished, covered with a thin layer of plaster or wallpaper or have a self-adhesive design for laminations.

The frame has a particularly robust design to reduce the transfer of the membrane vibrations to the surrounding structure. A 100-V is available as an option.
